Dhaka, Bangladesh

Cybersecurity analyst with hands-on security-operations experience across small-business environments, enterprise-style home labs, and structured mentorship. Experienced with alert triage, SIEM log analysis, phishing investigation, endpoint monitoring, vulnerability assessment, incident documentation, and security reporting. Practical exposure to Microsoft Sentinel, Splunk, LimaCharlie, Sysmon, Security Onion, Wireshark, KQL, PowerShell, Azure, and AWS. CompTIA Security+ certified; prepared to work within SOC procedures, SLAs, escalation paths, and 24/7 roster operations.

> **Target role:** Engineer, Cyber Defense Operations — bKash. **Evidence focus:** alert monitoring, initial triage, phishing/ unauthorized-access investigation, false-positive review, incident escalation, accurate reporting, and cross-team coordination.

CORE SKILLS ALIGNED TO CYBER DEFENSE OPERATIONS

Alert & incident operations: Alert triage, log correlation, IOC review, incident documentation, escalation workflows, severity assessment, shift handover, SLA awareness.

Threat investigation: Phishing, brute-force/RDP activity, suspicious IPs, unauthorized access, PCAP review, basic threat-intelligence and MITRE ATT&CK mapping.

Automation / analysis: KQL, PowerShell, Python basics, log parsing, daily summaries, false-positive reduction, vulnerability scan reporting.

SIEM / endpoint: Microsoft Sentinel, Splunk, Security Onion, Sysmon, LimaCharlie EDR; dashboards, log ingestion, detection rules, endpoint investigation.

Network / systems: TCP/IP, DNS, Windows, Linux, Active Directory, Wireshark, tcpdump, firewalls, patching, endpoint hardening, WAF concepts.

Cloud / governance: Azure and AWS fundamentals, IAM, cloud logging, misconfiguration review, security policies, compliance awareness.

PROFESSIONAL EXPERIENCE

Facility Care Solution Provider — Security Analyst & Technical Operations Expert — Jan 2025 – Aug 2026

Security consulting and technical operations support for small-business clients

- Provided basic SOC and security-operations support, including log monitoring, alert review, endpoint protection, and initial threat identification.
- Configured and reviewed firewall, antivirus, endpoint-security, IAM, and logging controls; documented findings and remediation recommendations.
- Conducted vulnerability scans using Nessus and open-source tools, then reported findings and tracked remediation priorities.
- Assisted with phishing awareness, security guidance, incident investigation, and remediation activities for client teams.
- Set up SIEM dashboards and log-ingestion workflows; automated daily log summaries with PowerShell to support faster review.
- Prepared security reports and helped clients maintain basic security policies, access records, and compliance evidence.

AJS Web Designs LLC — Support Engineer — Apr 2023 – Dec 2024

- Supported staff and clients across CMS, web, and application issues while coordinating with developers and designers to restore service.
- Performed website backups, migrations, security updates, plugin reviews, troubleshooting, and cross-browser quality checks.
- Built practical experience in availability, change coordination, issue documentation, and customer communication.

ARDB Corporation — IT Support Technician — Jan 2019 – Mar 2022

- Managed end-user accounts, devices, permissions, onboarding/offboarding, asset records, and Windows support in line with security procedures.
- Supported patch compliance, network equipment, user applications, system monitoring, audit preparation, and escalation of security concerns.
- Maintained accurate technical documentation and access records to support operational continuity and audit readiness.

SELECTED HANDS-ON SECURITY PROJECTS

Cybersecurity Mentorship Program — NPOWER Canada — 2025 – Present

Investigated simulated phishing cases with PhishTool; analyzed PCAPs using tcpdump/Wireshark; performed LimaCharlie EDR investigations; completed SIEM log analysis and incident documentation.

SOC Analyst Home Lab

Self-directed

Built Ubuntu/Windows attacker-victim VMs; deployed Sysmon and LimaCharlie for endpoint monitoring; created IOC-logging workflows and incident-response playbooks.

Cyber Security Detection Lab

Self-directed

Integrated pfSense, Security Onion, and Splunk; generated controlled login activity; analyzed logs and practiced detection and escalation decisions.

Azure Sentinel SIEM Lab

Self-directed

Simulated RDP brute-force activity; created geolocation dashboards and detection rules; tuned alerts and documented false-positive considerations.

CERTIFICATIONS

CompTIA Security+

Career Essentials in Cyber Security — Microsoft & LinkedIn (2024)

Practical Ethical Hacking (PEH) — TCM Security

Ethical Hacking Bootcamp — Zero To Mastery

EDUCATION

Postgraduate Diploma in Cybersecurity
Loyalist College, 2023
SIEM operations, network/cloud security, incident response, endpoint defense, Linux security, digital forensics.

Bachelor of Computer Engineering
North South University, 2019
Networking, operating systems, system architecture, programming, data structures, cryptography fundamentals.
